Duri di carattere, infaticabili per prestazioni, silenziosi e discreti nel più totale rispetto dell'ambiente: questa è l'innovativa linea di martelli idraulici che rappresenta concretamente la massima espressione nel settore delle attrezzature da demolizione.

The latest range of innovative hydraulic breakers, are sturdy, offer impeccable performance levels, and are totally eco-friendly being silent and discreet. Representing cutting edge technology in the demolition equipment field.

A NEW WORKING CONCEPT!

ISO 9001  
BUREAU VERITAS  
Certification

Azienda certificata ISO 9001:2000

- **Un'innovativa linea di martelli** che rappresenta concretamente la massima espressione nel settore delle attrezzature da demolizione abbinate alle macchine operatrici da cantiere.
- **Esclusivamente proposti in versione vibrosilenziosa** che, per il concetto di struttura portante adottato, assicura valori di pressione acustica a livelli assolutamente minimi, a reale vantaggio del confort operativo e dell'ambiente.
- **Semplice installazione** sulle macchine operatrici portanti, grazie ai dispositivi idraulici interni di stabilizzazione delle caratteristiche di pressione e portata idraulica.
- **Elevata contropressione tollerata** sul circuito di scarico a vantaggio della semplicità di applicazione e del massimo rendimento in energia di battuta.
- **Equipaggiati con dispositivo "CONTROL POWER SYSTEM"**, che oltre a recuperare automaticamente l'energia in fase di battuta, permette di ottimizzare le prestazioni del martello secondo le specifiche esigenze dell'utilizzatore e della macchina operatrice.
- **Ridotti periodi di manutenzione** richiesti e semplice praticità di intervento e controllo delle parti interne al martello grazie al concetto "EASY MAINTENANCE".

#### VANTAGGI PRATICI DELLA NUOVA TECNOLOGIA COSTRUTTIVA:

- Sella di chiusura della cassa monoblocco e corpo battente incorporante il punto di attacco benna alla prevista macchina operatrice.
- Maggiore compattezza del martello sulla sezione longitudinale a favore di una migliore praticità operativa, soprattutto in sezioni ristrette.
- Struttura esterna più snella, ergonomica e maggiormente solida.
- Cassa di contenimento del corpo battente del tipo monoblocco "integrato" e fissato tramite specifici tamponi in materiale elastico antivibrante.
- Minore stress operativo del blocco martello-macchina portante, grazie alla ridotta reattività trasmessa dal martello, abbattuta tramite i dispositivi antivibranti.
- Maggiore rendimento del corpo battente che sospeso elasticamente permette il recupero, durante il lavoro di demolizione dell'energia cinetica prodotta dallo stesso corpo battente, in energia potenziale elastica, restituita successivamente all'utensile.
- Eliminazione totale delle viti di bloccaggio corpo battente-supporti laterali con conseguente vantaggio sulla manutenzione.
- Livello della potenza sonora generata in fase di battuta ai minimi valori della categoria, garantito e certificato secondo la nuova direttiva comunitaria in vigore.

Tabella di riferimento del livello della potenza sonora (Direttiva 2000/14/CE)

Reference table of sound power system (Directive 2000/14/CE)

**LA DISCREZIONE È LA LORO FORZA.  
CONFORTEVOLI, SILENZIOSI E DAL DESIGN  
ACCATTIVANTE, UNA SERIE DI MARTELLI  
IDRAULICI CREATI APPOSITAMENTE PER  
SODDISFARE LE VOSTRE ESIGENZE.**

**ROTAIR... NON SOLO PROGETTA, REALIZZA  
E COMMERCIALIZZA PRODOTTI DI ULTIMA  
GENERAZIONE, MA OFFRE UN SERVIZIO  
PRE E POST VENDITA PERSONALIZZATO,  
RAPIDO E COMPETENTE.**

- An innovative **hydraulic breakers range**, which offers the best available in the demolition field for use on site operating machinery.
- A truly exclusive **silenced version** which due to the specific design of its supporting structure ensures that acoustic noise levels are reduced to a minimum, the advantages being environmental-friendly operating ease.
- **Installation simplicity** on supporting operational machines thanks to internal hydraulic stabiliser elements, pressure and hydraulic capacity features.
- **High counter-pressure tolerance** on the discharge circuit which makes for application simplicity and high performance levels in terms of power levels per stroke.
- Equipped with “**CONTROL POWER SYSTEM**” device, which as well as automatically recovering the power during the beat stage, also optimises the actual hammer performance according to the specific needs of the user.
- **Reduced maintenance frequency requirement**, simple and practical maintenance ease and constant monitoring on the internal hammer parts thanks to the “**EASY MAINTENANCE**” concept.

#### THE PRACTICAL ADVANTAGES OF THE NEW CONSTRUCTION TECHNOLOGY:

- Closure saddle of the single-block casing and beating section incorporating the point of bucket attachment on the relative operating machines
- Greater compactness of the hammer on the longitudinal section thereby making for greater operational functionality, especially in restricted sections.
- External structure, more streamlined, ergonomic and more solid.
- Casing of the beating body of single-section “integrated” type.
- Reduced operational stress of the hammer-supporting machine unit, thanks to the reduced reactivity transmitted by the hammer, damped by the antivibration device.
- Working pressure control valve, which ensures the correct hammer pressure irrespective of the operating pressure of the supporting machine.
- Beating body inserted inside the single-section casing and fixed by means of special buffers made of anti-vibration elastic material.
- Increased performance of the beater element which is suspended in an elastic manner and permits the recovery of the actual kinetic energy generated by the beater element during the demolition work, transforming it into potential elastic energy that is then returned to the implement.
- Total elimination of the locking screws which secure the beating section to the lateral supports with consequent advantages in terms of maintenance.
- Acoustic pressure levels generated during the beating stages, reduced to the minimum for its category, guaranteed and certified according to the new community directive in force.

THEIR SUBTLE OPERATING FEATURE IS THEIR STRONG POINT. THEY ARE HIGHLY COMFORTABLE AND SILENT, WITH AN APPEALING DESIGN. A RANGE OF HYDRAULIC BREAKERS SPECIFICALLY DESIGNED TO MEET ALL YOUR REQUIREMENTS.

ROTAIR... DOES NOT ONLY DESIGN, CONSTRUCT AND MARKET THE LATEST GENERATION PRODUCTS BUT ALSO PROVIDES A COMPLETE PRE AND POST SALES SERVICE THAT IS FAST, EFFICIENT AND PERSONALIZED.
